

Plants of the Bay

Name _____

Date _____

You are going to investigate living organisms that reside in the submerged aquatic vegetation (SAV) of a bay area. You will present your findings to the class, as well as add a visual of your organism to a class food web. The following should be addressed in your research and presentation:

- What is the common and scientific name of the plant?
- Describe the size and structure of the plant.
- What animal(s) may eat this plant to survive?
- What other interesting facts did you find out about this plant?
- Create a food chain that includes your plant (using words and arrows only).

In addition, create a picture of this plant to be used in the class food web. You may use technology or draw it by hand.
